4.Count no of Character and Lines

The screenshot shows an IDE with a project named 'Java' containing several files. The 'src' folder is expanded, showing files like 'CopyFile', 'CountFile', 'CreateFile', 'data.txt', 'HospitalAppointment', 'InventoryManagementDashboard', 'LarArr', 'Main', 'pallindrome', 'ReadFile', and 'SmallArr'. The 'CountFile.java' file is open in the editor. The code in 'CountFile.java' is as follows:

```
1 import java.io.*;
2
3 class CountFile {
4     public static void main(String[] args) {
5         try {
6             BufferedReader br = new BufferedReader(new FileReader("data.txt"));
7
8             int characters = 0;
9             int lines = 0;
10            String line;
11
12            while ((line = br.readLine()) != null) {
13                characters += line.length();
14                lines++;
15            }
16
17            br.close();
18
19            System.out.println("Number of characters: " + characters);
20            System.out.println("Number of lines: " + lines);
21        } catch (IOException e) {
22            System.out.println("Error occurred.");
23        }
24    }
25 }
```

The 'Run' tab at the bottom shows the output of the program:

```
"C:\Program Files\Java\jdk-26.0.1\bin\java.exe" "-javaagent:D:\Apps\IntelliJ IDEA 2026.2.1\lib\idea_rt.jar=55970" -Dfile.encoding=UTF-8 -Dsun.stdout.encoding=UTF-8 -Dsun.stderr.encoding=UTF-8
Number of characters: 59
Number of lines: 2
Process finished with exit code 0
```
