5. Delete and recreate the file

The screenshot shows an IDE with a project named 'Java' containing a 'src' directory. The 'DeleteFile.java' file is open in the editor. The code defines a class 'DeleteFile' with a 'main' method that attempts to delete 'data.txt' and then recreate it. The 'Run' console at the bottom shows the execution output: 'File deleted.' and 'File created again.', followed by 'Process finished with exit code 0'.

```
1 import java.io.File;
2 import java.io.IOException;
3
4 class DeleteFile {
5     public static void main(String[] args) {
6         try {
7             File f = new File("data.txt");
8
9             if (f.exists()) {
10                 f.delete();
11                 System.out.println("File deleted.");
12             }
13
14             f.createNewFile();
15             System.out.println("File created again.");
16
17         } catch (IOException e) {
18             System.out.println("Error occurred.");
19         }
20     }
21 }
```

Run Console Output:

```
"C:\Program Files\Java\jdk-26.0.1\bin\java.exe" "-javaagent:D:\Apps\IntelliJ IDEA 2026.2.1\lib\idea_rt.jar=55976" -Dfile.encoding=UTF-8 -Dsun.stdout.encoding=UTF-8 -Dsun.stderr.encoding=UTF-8
File deleted.
File created again.
Process finished with exit code 0
```
